

New Product Announcement

EntraPass Security Management System Software v7.50

Johnson Controls is pleased to announce version 7.50 of Kantech's flagship EntraPass Security Management System Software. Continuing to build upon a world class user experience with streamlined scheduling for EntraPass Special Edition and Windows Server 2016 Datacenter Compatibility.

EntraPass Security Management System Software is available in three different variations:

Special Edition (SE)

Single workstation security software

Corporate Edition (CE)

Multiple workstation security software, 50 mobile/web connections

Global Edition (GE)

Enterprise-level security software, supports up to 128 workstations, 200 web/mobile connections

Key Features / Benefits at a Glance

Windows Server 2016 Datacenter Compatibility

All editions of EntraPass now support installation on Windows Server 2016 Datacenter. A small exception for EntraPass Database Access exists with the EntraPass Global edition. In this case Global Edition still requires EntraPass server 2008 or 2012, or Windows 7/8/10. This exception will be eliminated in future releases of EntraPass.

Action Scheduler

Now available in EntraPass Special Edition, using the workstation under the Operation menu, the Action Scheduler can be used to create actions/ tasks on one-time specific or recurring

timeframes and on a daily/ weekly/ monthly basis. The actions are based on the door and relay behaviors such as locking/ unlocking doors, arming alarm systems and toggling relays. An example of this would be “Unlock the Front Door for 2 hours every 3rd Saturday of the Month”. Once programmed, these actions are native to the KT-1 and KT-400 running on the latest firmware. In addition, combine Action Scheduler with the powerful Smartlink Task option to execute completely custom actions.

24-bit to 32-bit Card Format Migration and Automatic Conversion

A new card number series for the ioProx card improves customer migration from 24-bit (HH:DDDDD) to 32-bit (HHHH:DDDDD) as default while avoiding duplication. The system will auto populate data for the extended family code if an existing card number uses the same value.

If Auto-Conversion is turned ON and an unknown card is presented, the system will validate the existing card numbers and automatically convert the presented card to the extended cards family code. The system will modify the card number and grant access to the presented card.

Note: This feature can be turned OFF once all cards have been read at least once.

KT-Standalone Import Tool

In December 2017 and April of 2018, Kantech released new firmware for the [KT-1](#) and [KT-400](#) respectively. With firmware versions 2.xx and higher using a dedicated web browser, the popular Ethernet-ready door controllers now have the option to be controlled and managed via a simple and intuitive web based software – no EntraPass software is required.

With these updates you can now import standalone unit configurations into new connections in EntraPass. It is fully available in EntraPass Corporate and Global editions with minor limitations within Special Edition.

Account Wizard (hatrix only)

The Account Wizard has been modified to fit the latest addition of the billing zip code, the operator e-mail, and the welcome e-mail settings for an account. Also, account creation is now a simple two-step process.

Ordering Information

EntraPass v7.50 software is now available for download by authorized personnel at www.kantech.com. For more information on EntraPass v7.50, please email kantechsales@tycoint.com or contact your Kantech account representative.
